

[LOBSTER PICTURES SPEC SHEET]

[TECHNICAL SPECIFICATION]

Sigma 10-20mm f/3.5 lens as standard

A high quality, wide-angle professional lens that shows all of your site at its best

IP66 - any weather, any temperature

Certified to 65°C. Tested through seven summers in Abu Dhabi and multiple winters in Northern Finland

8K and above

We are the first company to have developed and deployed 8K systems - shooting at an amazing 16x the resolution of HD

Cellular connection and cloud-based storage

All images transferred from the camera to cloud based storage location for avoidance of any potential catastrophic loss and ultimate peace of mind

[RELIABILITY]

Trusted and Experienced

We've safely installed and managed cameras in 20 countries on five continents

Redundant Secondary control and storage

For ultimate peace of mind, the Lobster Pot has two separate control and storage systems - this makes the most reliable system for long term time lapse

Everything Monitored - guaranteed service

All the camera's performance, from voltage, processor use, cellular connection and more, is monitored constantly. If there's a power cut on site, the system will alert our dedicated support staff immediately.

Safe working

Our team has more health & safety certifications and qualifications than any other provider - including BOSIET for offshore work

Site survey and RA/MS report

Site information gathered during site survey ahead of install, along with a full RA/MS report drafted, so you can rest assured the install process with with safe and seamless

[VIEWER]

High resolution imagery

Using our bespoke Lobster Vision viewing platform, you can view, navigate and save pictures at full resolution from any device - mobile, tablet or PC. Every image can be directly downloaded for use in print or online.

Share internally to engage stakeholders, manage suppliers and track project progress, or externally across your social platforms to truly engage your audience with your project's story.

Downloadable HD video

A bespoke two-minute automatically created 1080p broadcast quality video is produced every week and is instantly downloadable through Lobster Vision

Comparison Tools

Compare two separate images with our vertical and horizontal swipe tools

BIM integration

You can now view and share your model, accurately aligned with the high-resolution photographic record, from anywhere, helping you to achieve Level 2 or 3 BIM compliance on your construction project. Placing the model directly into the as-built record means you can compare the model from any camera angle, at any time in the past, and 'fast forward' to see how the building will look into the future.

Weather data

With every shot taken, wind, temperature and other weather data is stored - so you can check current or past weather conditions

Open API

Our API lets you embed any elements of Lobster Vision directly in your website - or easily integrate with your CRM or BIM software. Our team of developers would be happy to discuss your bespoke requirements!

[SERVICE]

An ISO 9001:2015 Company

Ensuring a commitment to quality and continual improvement across products and customer services. You can expect uniformed fully accredited staff, branded vans and RA/MS reports drafted as standard.

Dedicated support, throughout the project

Our support staff are on duty every single day including Christmas to ensure that all your cameras are working throughout your project, without fail

Professional Production and Post Production

Our editors and camera operators have many years experience producing material for documentaries and commercials - we bring this skill and dedication to every job
